

## Flatbed Truck Assembly Guide

### Chassis Assembly

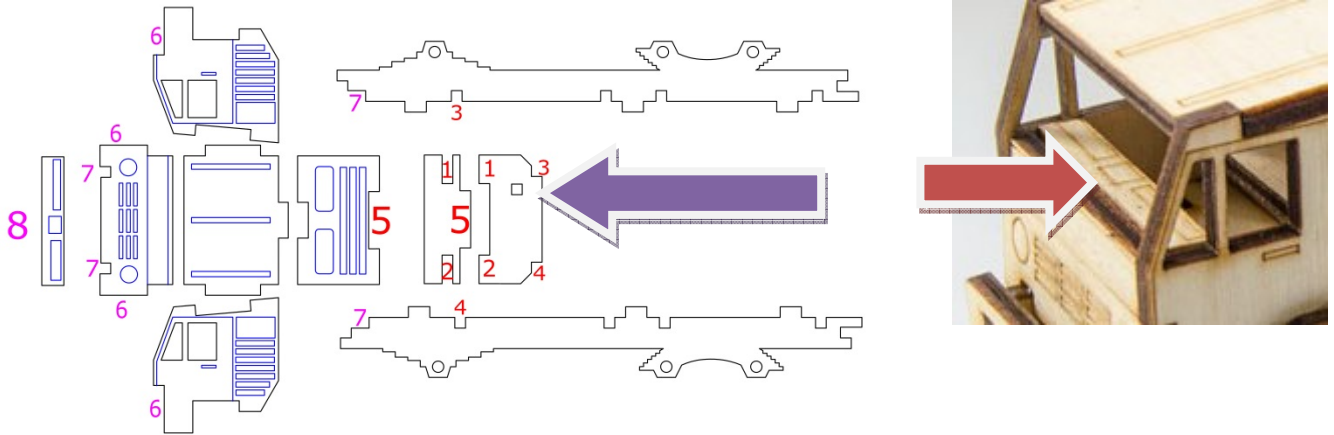

It is recommended that you first familiarise yourself with the assembly process, by test-assembling the vehicle before gluing it together.

### Load Bed Assembly

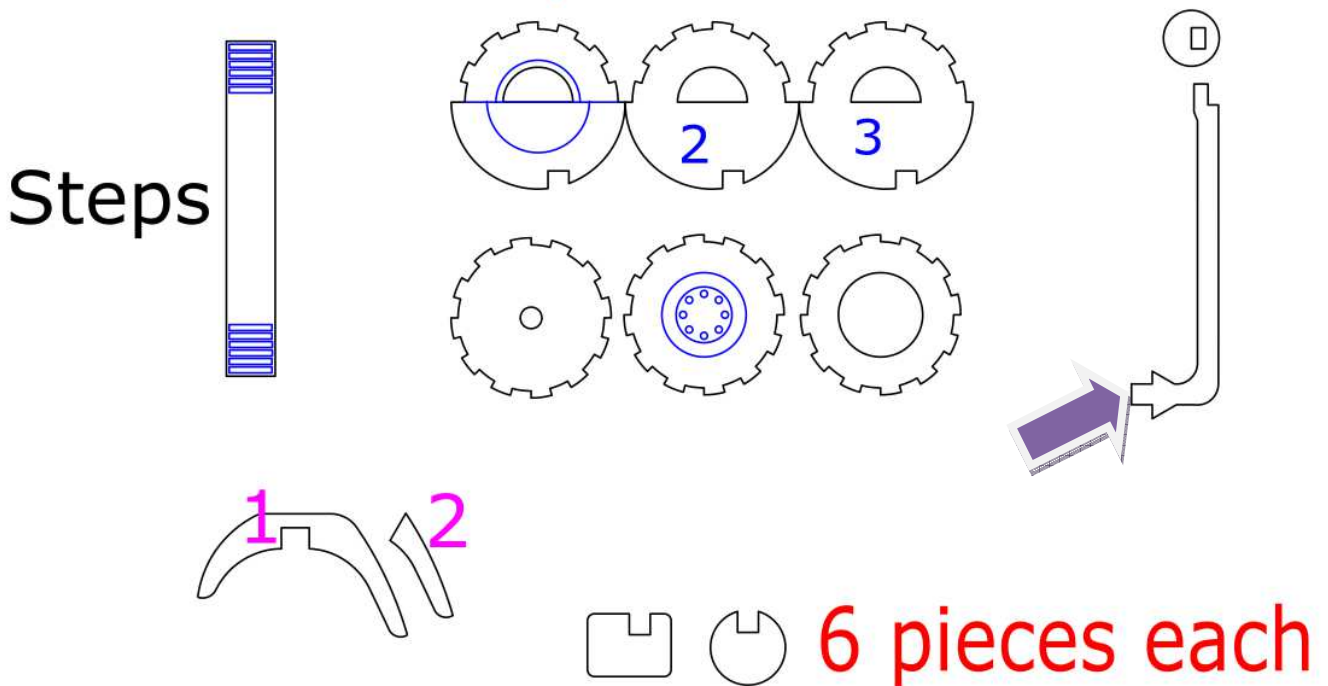

## Cab Assembly & Placement

Refer to the picture above for placement of the dashboard (Item 8), shown by the red arrow.

## Spare Wheel

Assemble the spare wheel in numerical order. This is to ensure the tread pattern on the wheel is correct. Attach behind the cab as shown by the orange arrow below.

Assemble the 6 wheels in the same manner, staggering the centre section of the wheel to create a tread pattern.

Assemble the air pressure tank (6 round pieces) and attach to the chassis as shown below by the blue arrow. Assemble the fuel tank (6 rectangular pieces), and attach to the chassis on the opposite side.

Assemble the mudguards by gluing (2) behind (1), then attach as shown below by the red arrow.

Attach the steps under the cab as shown by the green arrow.

Attach the small cap to the air filter intake and attach behind the cab on the right hand side as shown by the two purple arrows, below and in the "Cab Assembly" section above
